DETAILED ACTION

1. This office action is in response to the Amendment and Remarks filed 15 May 2006, in which claims 21-47, 49-52, and 54-73 were presented for examination.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 21-44, drawn to a system, method and medium for discovering and maintaining geographic location information comprising: a portable computing unit, a communication facility, a location generator, a network switch, wherein the network switch is configured to append physical coordinates to a message from the network site to another network site, classified in class 701, subclass 213.
 - II. Claims 45-47, 49-52, and 54-56, drawn to a system, method and media comprising: generating physical coordinates corresponding to a first network entity location, sending one or more network messages to an intermediate network device having a plurality of ports and associating the received coordinates with a given port, classified in class 370, subclass 351.
 - III. Claims 57-73, drawn to a system, method and medium comprising: a first network device interconnected to an intermediate network device, wherein the intermediate device receives messages on a particular port, storing

physical coordinates at a memory location associated with the particular port, classified in class 710, subclass 12.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I, Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination of Group I has separate utility such as a portable computing unit with a communication facility that transmits one or more network messages to any or an arbitrary port of a network switch that is configured to append physical coordinates to a message. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
